EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kevin Costanza on 5/13/04.

The application has been amended as follows:

In claim 1 line 3, the phrase "of like material" has been deleted.

In claim 22 line 1, "17" has been replaced with --14--.

In claim 23 line 3, "like" has been deleted.

In claim 23 line 8, the phrase "between 40 and 68" has been replaced with --approximately 54--.

In claim 23 line 11, the semicolon has been replaced with a period.

In claim 23 lines 12-13, the phrase "wherein the tangential contact angle is approximately 54 degrees from the coupling axis." has been deleted.

In claim 25 line 2, the phrase --for containing fluid at a pressure greater than or equal to 15,000 psi-- has been inserted after "system".

In claim 26 line 2, the phrase --for containing fluid at a pressure greater than or equal to 15,000 psi-- has been inserted after "system".

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior art of record does not disclose, singly or in combination, the device as claimed in detail in claims 1, 9, 15, 17 and 23, or the method as claimed in detail in claims 25 and 26.

The closest prior art includes: Anglin et al (US 5,489,127), Haibara (US 6,045,162) and Hashimoto (US 5,172,939).

Anglin et al fail to teach or fairly suggest that the device is for fluids at pressures in excess of 15,000 psi, an ultrahigh pressure environment. Anglin's device is rather used in vehicle brake lines or fuel lines. There is no mention or suggestion that his device is applicable to or capable of being used in an ultrahigh pressure environment.

With respect to claims 1, 9, 17, 25 and 26, Haibara in view of Hashimoto does not teach or fairly suggest that one of the mating components (the fitting bore) has a convex, curved cross-sectional profile that contacts the linear cross-sectional profile of the other component (the vessel bore) in a substantially circular seal. With respect to claim 15, Haibara in view of Hashimoto does not or fairly suggest that the tapered mouth of the vessel bore contacts the tapered engagement portion of the fitting bore to form a circular seal that has a tangential contact angle approximately 54 degrees from the longitudinal and radial axes. With respect to claim 23, Haibara in view of Hashimoto does not teach or fairly suggest that a circular seal that has a tangential contact angle approximately 54 degrees from the coupling axis.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James M Hewitt whose telephone number is 703-305-0552. The examiner can normally be reached on M-F, 930am-600pm.
